X

BeHave Access is a cloud-based application designed to enhance security and compliance in SAP systems offering a range of tools for analysis, monitoring and correction. **BeHave Access manage ECC and S/4 Hana version of SAP System.**

The benefits of BeHave Access architecture are :

- **High Availability** to ensure that customers can always access their data and report with minimum downtime.
- **Auto-Scaling:** Dynamically adjusts resources based on customer demands to maintain optimal performance during peak times.
- **Version Upgrades:** Facilitates seamless updates to the platform, reducing disruption during maintenance and version changes.

BeHave Access is a powerful solution for SAP administrators and security teams to monitor and analyse SAP environments, ensuring compliance with SAP SoD management best practices and reducing vulnerabilities.

Main Features of BeHave Access:

1. Uploading Configuration Files

- **Remote Connection to SAP System:** Allows direct upload of configuration files from the SAP environment (if remote access is enabled).
- **Flat File Upload:** Users can manually upload configuration files in a flat file

2. Uploading Log Files

- **Remote Connection to SAP System:** Logs can be uploaded directly from SAP via remote connection (if enabled).
- **Flat File Upload:** Users can upload log files in flat file format for offline analysis.

3. BeHave Task Execution

- Generate a detailed reports on potential security issues and leaks in the SAP system, such as:
 - **SoD (Segregation of Duties)** violations
 - **Dormant Accounts** (inactive users)
 - **Used and Deleted Transactions** (tracking user activities with SAP transactions)
 - **Organizational Objects** configured in the mandate
 - ...

4. AI-Powered Reporting

BeHave Access leverages Artificial Intelligence to analyze vast amounts of SAP data and generate sophisticated reports. These AI-driven insights can help detect patterns for users activities

- **Online Reports:** Access live reports featuring:
 - Dashboards with **Sensitive KPIs**
 - **Aggregated Subreports** for deeper insights
 - **Predictive Analytics:** By analyzing past user behavior and activities and system configurations, AI can propose an optimal roles.
- **Deep Analysis of Security Messages:** Detailed review of security-related messages tied to user activities within the SAP system.

5. Monitoring Sensitive Transactions

- **Scheduled Transaction Monitoring:**
 - Set up monitoring for sensitive SAP transactions via transaction codes (tcodes).
 - Define recipient(s) for daily email notifications related to these monitored transactions.
- **Real-Time Monitoring:** If remote connection to SAP is enabled, real-time access to user activities, with the ability to view updates within a specific date range.

6. Deep Log Files Analysis

- **Offline Search:** Ability to perform detailed offline searches across log files based on criteria such as:
 - Date range
 - User
 - Transaction code (tcode)
 - Terminal activities

7. Leak Correction

- **Offline Correction:** Provide offline solutions for fixing identified security leaks, typically through mass SAP system patching.
- **Online Correction:** If a remote connection to the SAP system is enabled, BeHave Access can implement fixes directly in real time.

Key Benefits:

- **Enhanced Security:** Comprehensive reporting and monitoring of user activities, transactions, and system configurations to identify potential security risks.
- **Automation & Efficiency:** Automates tasks like leak detection, monitoring, and patching, streamlining SAP security management.
- **Scalability:** The system can scale based on user needs, ensuring performance during peak demands.
- **Flexibility:** Supports both real-time remote operations and offline analyses, offering flexibility for different operational environments ,les outils de filtrage offrent une approche intuitive pour explorer les données.

Le **BeHave Conformity Score** fournit une synthèse claire des non-conformités et des actions à entreprendre pour améliorer la sécurité du système.

En utilisant ces fonctionnalités, BeHave contribue à une gestion optimisée des risques et à la mise en place de mesures correctives pour garantir un environnement SAP conforme et sécurisé.
